00 / BYTEDANCE · XUELANG

Xuelang Commercial Experience Upgrade

From a course-selling tool to a high-quality learning platform

ROLE

Lead UX Designer

DURATION

Mar-Apr 2022 · 2 months

STATUS

14-day experiment · GMV per user
+11.75%

00 / OVERVIEW

Make course quality perceptible across the full journey

As the lead designer, I owned the overall experience strategy, core journeys, and key design solutions, partnering with other designers, product, data, engineering, and operations through delivery and experiment validation.

This was not a single-page redesign. It translated course quality from internal rules into signals learners could understand and verify before and after purchase.

01

Discover

02

Build trust

03

Decide

04

Keep learning

05

Create the foundation for repurchase

01 / BUSINESS CHALLENGE

Move from fulfilling transactions to supporting learning relationships

First purchases often happened on Douyin, while Xuelang mainly fulfilled courses. Sustainable growth required the platform to help people discover quality courses, judge value, and continue learning.

The experience challenge shifted from selling efficiently to making quality recognizable, decisions easier, and learning more continuous. Return and repurchase remained future foundations, not claimed outcomes.

Platform scale

500K DAU

Business ambition

RMB 30B annual GMV

Experience shift

Transaction → Learning relationship

02 / PROBLEM DEFINITION

The issue was not missing information, but low interpretability

01

Hard to recognize

Course information was abundant, yet learners lacked a stable standard for identifying quality.

02

Hard to trust

Instructor, structure, and outcome evidence were fragmented across the decision path.

03

Hard to persist

Entry, viewing, interaction, and learning assets did not form a continuous experience.

Additional audience and category context

Define quality on one side and complete the journey on the other

Define what makes a quality course, then carry that evidence through discovery, purchase, and learning.

Sell quality courses

x

Learning experience

One side created a consistent evidence language; the other placed that evidence where learners actually needed to decide and act.

Establish a recognizable quality standard

Learners did not need more course information. They needed interpretable evidence: teacher credibility, course structure, learner outcomes, reviews, and platform guarantees.

The decision was to make the standard visible and consistent, not add another promotional label. Quality standard → information modules → consistent expression across touchpoints → learner trust.

01 Quality standard Define credibility, structure, outcomes, reviews, and guarantees.
02 Information modules Turn abstract criteria into scannable interface evidence.
03 Consistent touchpoints Reuse the same quality language in discovery, selection, and detail.
04 Learner trust Lower interpretation cost through evidence that can be verified.

Turn internal criteria into evidence learners can judge

The detail page stops stacking claims. Instructor, course, and platform evidence answer credibility, fit, and risk in a deliberate order.

- 01

Recognize the instructor

Certification, background, and influence share one judgment zone.
- 02

Evaluate the course

Trial content, syllabus, and work samples explain quality and difficulty.
- 03

Reduce purchase risk

Refund, verification, and review signals use one platform language.

PRODUCT UI / COURSE DETAIL

Real product UI; reasoning has been separated from the presentation board.

Reconstruct the purchase decision path

The detail page had to answer “Is it relevant to me?”, “Can I trust the instructor?”, and “Is it worth buying now?” in an intentional sequence.

Trial content moved into the hero so learners could verify the course before reading reviews, structure, and benefits. A/B/C variants tested the information order, while different course categories still required category-specific templates.

Verify the content before evaluating the price

The experiment held the course constant and changed only trial placement and evidence order. The selected version made content quality verifiable in the first screen.

01	Control	Preserve the previous hierarchy as the behavioral baseline.
02	Review evidence	Learner feedback confirms outcomes without becoming the first claim.
03	Hero trial	Move the strongest explanation forward and shorten the path to verification.

SELECTED / HERO TRIAL

Trial content enters the first purchase-decision screen.

CONTROL / BASELINE

Other information remains controlled.

EVIDENCE / REVIEWS

Reviews confirm rather than initiate the decision.

Connect a continuous learning experience

Course delivery was not the end state. The redesign connected course entry, immersive viewing, fragmented learning, interaction, and note or learning-asset accumulation, balancing immersion with operating efficiency.

Content delivery → Continuous learning experience

Before · Content delivery

Entry and content existed, but learning actions remained disconnected.

After · Continuous learning

Viewing, interaction, and learning accumulation become one continuous experience.

CONTINUOUS LEARNING

From entering a course to building personal learning assets, every state makes the current position and next action clear.

01

Course entry

Instead of showing one fixed destination, the entry adapts to no course, an unstarted purchase, recent progress, or a teacher going live, surfacing the most relevant next action.

01

No course yet

Turn the empty state into a useful path through categories and course recommendations.

02

New course, not started

Prioritize the latest purchase and shorten the path from transaction to first learning action.

03

Recently learning

Preserve the course, lesson, and progress so the next session can begin immediately.

04

Teacher is live

Raise an active class above routine progress so learners do not miss real-time interaction.

02

Immersive focus

Reduce distraction while keeping necessary controls legible.

03

Fragmented learning

Preserve progress and context for short return sessions.

Interaction

Keep immersive viewing, frequent controls, and lesson switching in one learning context.

01 Immersion and smooth control

Dark viewing states keep brightness and playback-speed controls in one learning context, reducing disruptive mode changes.

02 Efficient fragmented learning

Observed penetration reached 52.62% for progress, 42.21% for fullscreen, and 7.49% for speed control, supporting easier access to frequent actions.

03 Faster lesson switching

Learners averaged about five lessons and 36.5 min per day, making high-frequency lesson navigation important for locating the next segment.

The product canvas stays intact while design rationale and observed signals remain editable HTML.

Notes and learning assets

Accumulate notes and outcomes into personal value worth revisiting.

Capture thinking without breaking the learning state

Notes become a continuous action inside the player: capture, retain the timestamp, write, and accumulate the result in a personal notebook.

- 01

Act in place

Notes sit beside speed and fullscreen in the high-frequency control zone.
- 02

Preserve context

A screenshot and video timestamp are saved with the note.
- 03

Build personal value

Notes accumulate by course instead of ending as one viewing record.

02 / EDIT IN CONTEXT

Writing stays connected to the current video.

01 / CAPTURE

The high-frequency control zone opens notes directly.

03 / ACCUMULATE

Viewing records become revisitable learning assets.

Commercial outcomes and behavioral signals validated the direction

VALIDATED / 14 DAYS

Validate the direction without extending it into a long-term claim

Results are relative changes observed during the experiment. Each signal returns to the decision it measures instead of becoming an isolated performance claim.

- 01

Commercial signal

GMV per user increased by a relative 11.75% in the experiment group.
- 02

Behavior signal

Course-detail exposure penetration improved by 1.36%.
- 03

Variant signal

The hero trial-content variant lifted purchase conversion by 6.5%.

EVIDENCE / SELECTED STATE

The measured product state returns as the object of validation.

+11.75%

GMV per user in the experiment group increased by a relative 11.75%

+1.36%

Course-detail exposure penetration improved by 1.36%

+6.5%

The hero trial-content variant lifted purchase conversion by 6.5%

+43% / +55% / +39%

Detail-page dwell time improved by 43% / 55% / 39% across experiment variants

Data represents cumulative relative values over the 14-day experiment period.

Turn “what makes a quality course” into a system learners can keep perceiving

This project clarified that platform experience is not just clearer content arrangement. It turns course quality into a system people can understand, verify, and perceive over time. Standards support recognition, purchase evidence lowers decision cost, and the learning experience gives a transaction the possibility of becoming a longer relationship.

The next questions are how each course category should combine evidence more precisely and how learning assets might support return and repurchase. These remain future hypotheses, not validated outcomes from this phase.
